DETAILED ACTION

Applicant's amendment filed February 14, 2003 (Paper Number 7) has been received and entered. Claims 18-19 have been added, consequently claims 1-19 are pending in the instant application.

All grounds of rejection in the Office Action mailed June 13, 2002 are withdrawn.

The following new grounds of rejection are applied to the claims:

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-17 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Roy.

The claims are directed to a method of staining a biological specimen with a histological stain, wherein the specimen is treated by a process that includes treatment with a corrosive

Art Unit: 1645

reagent, the process comprising the steps of: dispensing onto a biological specimen an oxidizer that is a precursor of the corrosive reagent; and dispensing onto the biological specimen an acid source of hydrogen ions that is other than the corrosive reagent, whereby the oxidizer combines with hydrogen ions and the combination of oxidizer and hydrogen ions contacts the biological specimen, thereby treating the biological specimen with the corrosive reagent.

Roy (Stain Technology Vol. 58, No. 4, pp 215-218, 1983) disclose of the visualization of *Legionella pneumophila* in paraffin sections using hexamine silver. Roy further disclose of pretreating the biological sample with potassium dichromate (oxidizer that is a precursor of the corrosive reagent), followed by treatment with Holmes boric acid-borax buffer (acid source of hydrogen ions that is other than the corrosive reagent).

In view that Roy disclose of staining a biological sample with a histological stain comprising dispensing an oxidizer that is a precursor of a corrosive reagent and subsequently dispensing onto the biological specimen an acid source, the disclosure of Roy is deemed to anticipate the claimed invention.

It is noted that Roy do not teach of perchloric acid as the hydrogen ion source. However, the choice of a particular acid (e.g., boric acid vs. perchloric acid) accomplishes the same function in donating a hydrogen ion, and therefore are deemed to be equivalent, absent unexpected results.
